

# Photo-Documentation of Injuries – Thursday 04 March 2021

## Dr Will Anderson

Dr Will Anderson has been a full-time FME for 15 years. He is the Lead FME in Hampshire and his particular interest is photo-documentation of injuries. He was the lead author on the Photography In Custody and SARCs (PICS) document that was updated in December 2019 and is the course director of the "Patient Focused!" medical photography course that is specifically designed for clinicians. The modules for the course are free to do and details can be found at [www.patientfocused.co.uk](http://www.patientfocused.co.uk). The module number 5 will be of particular value prior to attending the webinar, and is free to view at <https://www.screencast.com/t/Y540JHAI2>.

He is looking forward to presenting on some of the issues that clinicians will encounter when photographing patients.

## Learning Objectives

- Advantages of photo-documentation compared with body diagrams;
- Common errors;
- Techniques to avoid errors.
